# Seemplicity Agentic Exposure Action Platform™

Apply deep context and speed across the exposure lifecycle to outpace AI-driven attack velocity.

In the AI-driven world we live in, detection is easy, but context-aware action is essential for resilience. While attackers use AI to scale, security teams drown in disparate signals and manual coordination that slow remediation. Speed and context matter more than ever.

Seemplicity is the Agentic Exposure Action Platform™ that closes the gap between finding an exposure and actually resolving it. Our Agentic Workforce moves beyond static rules to transform fragmented data into a high-velocity remediation engine. By linking exposure data, threat intelligence, and business context, we deliver the right tasks to the right people in the tools they already use.

“ Within a few hours we were receiving data from our tools in Seemplicity. Within a few days, we had already had tickets assigned.”

Senior Director of Cyber Operations

/how it works:

With Seemplicity,  
organizations  
have achieved:

4x

improvement in number of  
exposures remediated

90%

reduction in unknown asset  
ownership

6-figure

annual cost savings with tool  
rationalization

## Driving Exposure Management through Agentic Action

### Eliminate Friction and Force-Multiply Your Fixes

- ✔ **Shrink the Noise:**  
Synthesize hundreds of alerts into single Root Cause Fixes, reducing alert volume by up to 90%.
- ✔ **Accelerate MTTR:**  
Eliminate manual research by delivering step-by-step instructions directly to the correct developer backlog
- ✔ **Contextual Reachability:**  
Analyze network paths to ensure teams focus on what an attacker can actually reach

### Clear Ownership For Better Execution

- ✔ **Determine Asset Ownership:**  
Identify the technical team responsible for unclaimed assets, even as org structures evolve.
- ✔ **Drive Autonomous Accountability:**  
Operationalize the transition from overwhelming signals to autonomous, verified action.
- ✔ **Expose Toxic Combinations:**  
Surface hidden exploit chains where independent, low-severity issues merge into high-risk paths.

“What stood out to me about Seemplicity most was their use of artificial intelligence, bringing the issue to the end user that can actually solve the problem.”

VP of Security Architecture &  
Engineering

### Turn Fragmented Data into Decisive Action

- ✔ **Agent-Ready Grounding:**  
Normalize fragmented security data into a unified, AI-consumable format.
- ✔ **Real-time Conversational Intelligence:**  
Generate summaries or get instant status updates via the Seema AI Assistant.
- ✔ **Quantifiable Risk Reduction:**  
Transition from reactive operations to a high-velocity program with measurable results.

### Strategic Alignment Across Crossfunctional Teams

- ✔ **High-Confidence Routing:**  
Route requests with high confidence, providing developers with clear, consistent fixes.
- ✔ **Simplify Complex Narratives:**  
Translate scanner outputs into summaries tailored for non-technical stakeholders.
- ✔ **Full Lifecycle Partnership:**  
Apply deep context and prioritization to every finding across the entire exposure lifecycle
